I'm a Senior Cloud Engineer with 5 years of experience, specializing in designing and building scalable, reliable backend systems on the cloud. My focus is on architecting large-scale systems, optimizing performance and cost, and ensuring high availability. I'm working toward becoming a Solution Architect, with a strong interest in system design, cloud architecture, and building end-to-end solutions that align with business needs..

Education

Ho Chi Minh City University of Technology

2017-2021

Specialized: Software Engineering

Degree classification: Very good

GPA: 3.5/4

Toeic: 550/990

Professional Experience

PNJ, HCM

Senior Cloud Engineer

June 2023 - Present

Senior Cloud Engineer at PNJ — Vietnam's top jewelry manufacturer & retailer, operating cloud platform for nationwide retail and e-commerce.

Responsibilities:

- Own end-to-end DevOps lifecycle on AWS (VPC, EC2, S3, RDS, Lambda, EKS, CloudFormation, CloudWatch, IAM, SQS, SNS, KMS, API Gateway, Route 53...) for production e-commerce and retail systems.
- Design, provision, and operate cloud infrastructure as code with **CloudFormation CDK/Terraform**, ensuring reproducible, version-controlled environments across staging, and production.

Residence: 🏠 District 8, HCM

- Build and maintain **CI/CD pipelines** on BitBucket AWS CodePipeline/CodeBuild
- Operate and tune **Kubernetes (EKS)** clusters — HPA, cluster autoscaler, ingress, service mesh — to support microservices at scale.
- Lead **cost optimization** initiatives (rightsizing, Spot/Savings Plans, lifecycle policies) and capacity planning for peak campaigns.
- Partner with **SecOps** on cloud security: IAM least-privilege, WAF, DDoS protection, and audit compliance.
- Mentor backend developers on cloud-native patterns and self-service deployment workflows.

Achievements:

- Sustained **99.95% uptime** for AWS infrastructure serving **400+ retail stores** through peak campaigns (Tet, God of Wealth Day) with multi-AZ EKS, auto-scaling, and active-passive failover.
- Cut monthly AWS spend by **~20%** via EC2/RDS rightsizing and instance type, Spot & Savings Plans, and S3 lifecycle policies — no impact on SLOs.
- Standardized provisioning with **CloudFormation/Terraform (IaC)**, dropping new-environment spin-up from days to under an hour.
- Built an **AWS-equivalent local dev environment** with Floci & Docker Compose cutting dev cloud cost and enabling offline development with faster feedback loops.
- Collaborated closely with **SecOps** to deliver secure services and harden the platform against 95% **DDoS attacks** using Cloudflare, WAF.
- Bootstrapped **multiple AWS accounts from scratch** for new projects — from network foundation (VPC, subnets, NAT, Route 53, VPN, Transit Gateway) to core infrastructure (EKS, RDS, IAM, CI/CD, monitoring) — delivering production-ready environments with consistent security baselines.

Typescript NodeJS AWS VPC EKS Docker MongoDB Mysql ES Lambda S3 RDS EC2

YouNet Media, HCM

Backend Engineer

Aug 2021 - June 2023

Backend Engineer of the best company providing social media analytics solutions (Social Media Analytics) in Vietnam.

Responsibilities:

- Work on the E-commerce Intelligence project, develop services to collect and analyze sales of e-commerce sites. Most data come from E-commerce site like Shopee, Lazada, Tiki
- Working on microservice project using NestJS, RabbitMQ, K8s, Solr, MySQL...
- Handle and improve ELT services using NestJS with monorepo architecture and use Lerna to manage it
- Develop and implement cron jobs worker to compute raw data to analytics data
- Contribute solutions to improve data processing more and more efficiently
- Deep understanding of existing architecture data to solve problems or export adhoc data for customers

Achievements:

- Good completion handle and improve ELT services with more than **80 million documents** per day
- Develop and improve services to compute data and scalable
- Reduced compute data time for 1 week from **48 hours to 6 hours**
- Applied Apache Airflow to manage sequentially running data processing services
- Hosted tech talks. Topics: what is airflow and how it work?.
- Applied Slack to monitoring services
- Quickly handle data problems and support customer requests for data with more than **2 billion documents**

2359 Media, HCM

Backend Engineer Intern

May 2021 - July 2021

Backend Engineer Intern of Asia's leading digital consultancy and the preferred choice for cross platform engagement strategies.

Responsibilities:

- Learn git workflow, known and working with scrum agile
- Create the website allows you to zip the files you want to share with others or for yourself
- Deploy and apply CI/CD for website

Achievements:

- Works well with git workflow and agile scrum
- Improve technical skill, coding better
- Complete the tasks on time
- Completion create and deploy website
- <https://sharefilesz.herokuapp.com>

NodeJS Express Javascript PostgreSQL Redis Socket io

Certificates

- Mastering Agile Project Management course by Fresher Academy

Soft Skills

- Communication and teamwork
- Withstand pressure of work
- Adapt quickly to new knowledge
